

Response variation within V1 and across higher visual areas

Dots are session × location/area means; faint lines join the same session; boxes show the session-level IQR and 10th-90th percentiles; thick bars are mean ± 95% CI.

Y-scales are matched across columns within each row. Visual Coding VISp is a session-level regional reference, not another within-V1 location. F1/F0 uses common QC and matched 1-s, 15-trial, SF 0.04, contrast 0.8 support; Allen F1/F0 uses 28 complete Brain Observatory sessions.
